Executive Summary

The Red Light Camera program was enacted in 2005 by Pennsylvania Legislation in response to serious accidents and fatalities in a report issued identifying two (2) intersections along the Roosevelt Boulevard as among the most dangerous roads in the nation. Since the start of the program in 2005, all of the intersections entered into the Red Light Camera program have seen immediate and substantial reductions in red light camera violations.

The program’s success is apparent from the significant and historical reductions in violations at all intersections. Currently, there are two intersections about to begin construction (31st and Spring Garden Streets and 52nd Street and Lancaster Avenue), and two more are being proposed to be added to the Red Light Camera program (58th Street and Baltimore Avenue and Front Street and Hunting Parking Avenue).

Comparing calendar year 2020 to 2019, violations increased 10.47%. Overall, violations rose at sixteen (16) locations and decreased at fourteen (14). This could have been caused in part by the pandemic and the stay-at-home order. In addition, a new intersection was added at 70th and Lindbergh. Once commuters return more regularly to Center City, it is anticipated that intersections that experienced increases in violations will return to pre-pandemic norms or lower.

Recommended improvements to the Red Light program are outlined below. I am available to answer any questions or concerns.

Respectfully Submitted,

[Signature]

Scott A. Petri
Executive Director
Recommendations

The goal of the Red Light program is safety and the reduction of serious accidents and fatalities attributed to the running of red lights. To that end, we recommend certain changes to the program. These recommendations are similar to those presented in last year’s report.

For the reasons described later in this report, the Philadelphia Parking Authority (PPA) recommends:

- Consider increasing the fine for red light camera violations from $100 to $150 to deter violations. The fine for violations has remained at $100 since the program’s inception in 2005. It is believed that the proposed increase will further reduce violations;
- Add two (2) proposed locations to the Speed Camera pilot program at 700 W. Roosevelt Blvd. and 5000 Roosevelt Blvd. The locations are still in the process of being studied.
- Implement a process to write off bad debt. Outstanding debt is aging and a portion is already 10 years or older and is largely uncollectable, and
- Add additional intersections to the Red Light Camera program based upon a Vehicle Incident Monitoring System (VIMS) study which will prioritize new intersections based upon results of that study.
Overview of Red Light Program

The Red Light Camera program was created to improve safety at intersections within the City of Philadelphia. It is part of the Vision Zero initiative adopted by the City. The first locations were installed in 2005. Since its inception, the program has grown to include thirty-two (32) intersections as of fiscal year 2021, with more being proposed. Enforcement at 70th & Lindbergh began on August 1st, 2020. Two (2) additional intersections are awaiting the start of construction, 31st and Spring Garden and 52nd and Lancaster. These intersections are anticipated to be operational in 2022.

Due to the positive impact of the Red Light program, there are forty-seven (47) locations proposed for study identified in Appendix A. During the past year, the Philadelphia Streets Department with the PPA and the Red Light camera vendor have been conducting walkthroughs to further evaluate the locations that were provided by the City and elected officials. The process for selection of suitable sites is conducted by PennDOT, the Office of Transportation, Infrastructure and Sustainability (OTIS), and the Philadelphia Streets Department.

Since fiscal year 2008, the Red Light program has resulted in $105,840,777.00 being sent to the Pennsylvania Department of Transportation for safety grants. Fifty percent (50%) of these funds are provided to the City of Philadelphia under the Automated Red Light Enforcement Transportation Enhancements Grant Program (ARLE Funding Program) for assistance in funding transportation projects. The Philadelphia Parking Authority, with the assistance of PennDOT, the Philadelphia Streets Department, and Office of Transportation and Infrastructure (OTIS) are working together to achieve the goals of the Mayors Vision Zero program. By making intersections safer for drivers and pedestrians with Red Light Cameras and the implementation of Speed Cameras on the Boulevard, this goal is being advanced.

The PPA reports annually on the number of violations at each intersection from their inception date to present. A list of intersections which are monitored and the number of violations issued during the warning period, the first fiscal year, and the latest fiscal year is attached in Appendix B. These figures support the assertion that Red Light Cameras substantially reduce the number of Red Light violators once the warning period expires and that the number of violations remain at lower levels. The change in driving behavior caused by Covid and the stay-at-home order created some anomalies. An article
published by The Washington Post in May of 2020* reported that traffic volume reduced across the United States during the Covid shutdown allowing for more risky and distracted driving behavior. As workers return to office work, it is expected that the violations will normalize.

Intersections and Violations

Currently, there are thirty two (32) intersections installed in the City of Philadelphia, located throughout the City. Comparing fiscal year 2020 (FY2020) to fiscal year 2021 (FY2021), there was an increase in total violations of 15.63%. Twenty eight thousand eight hundred and seventy nine (28,879) more citations were issued during FY2021 than in FY2020. Of this increase, five thousand five hundred and thirty six (5,536) are the result of cameras becoming operational at 70th Street and Lindbergh Boulevard. Three thousand one hundred and fifty one (3,151) were warnings. The most apparent contributing factor was likely the stay-at-home restrictions that were imposed during the pandemic. Cities reported that less trips resulted in more speeding and erratic driving.

Not all intersections saw an increase. There were reductions at fourteen (14) intersections including Island and Bartram Avenues; twelve thousand six hundred and thirty (12,630) violations were issued in the calendar year 2019, and in 2020 nine thousand seven hundred and seventy two (9,772) violations were issued in calendar year 2020. Island and Bartram Avenues are located near the Airport, which saw a decrease due to travel restrictions.

The Covid shut down did have an impact on the number of violations. From March to May of 2020 there were only thirty five thousand six hundred and seventy five (35,675) citations issued compared to the same months in 2019 where forty four thousand nine hundred and seven (44,907) citations were issued. Red Light Violations started to increase in June of 2020.
Results from New Intersections

The installation of a Red Light Camera at 70th Street and Lindbergh Boulevard was delayed by the Governor’s restrictions of construction, but when the moratorium for construction was lifted in May of 2020 the intersection was able to be completed. The warning period began on August 1, 2020 and the Authority started issuing live notices on September 17th, 2020. In August of 2020, one thousand seven hundred and forty six (1,746) warnings were issued. In October, the first full month of notices that had fines attached, only had nine hundred and eighty five (985) citations issued. This was a decrease of 44.6%. The number of violations issued at this location have continued to decline.
Effect of Speed Cameras on Red Light Violations

Speed Camera legislation was approved by the state for the Route 1 (Roosevelt Boulevard) corridor with installation of eight (8) locations for the cameras completed on June 1, 2020. The warning period ended on August 1, 2020. Five (5) of these locations are near established Red Light Camera locations, being Southampton Road, Red Lion Road, Grant Avenue, Levick Street, and Mascher Street.

Due to the Covid shutdown, it is unknown if there was any significant effect the Speed Cameras had on the Red Light intersections that are located in close proximity. The implementation of the pilot Speed Camera program along the Roosevelt Boulevard will likely impact the intersections containing Red Light Cameras along the Boulevard. The expectation is that Speed Cameras will further reduce the number of violations at all nine (9) Red Light Camera locations along the Roosevelt Boulevard. As workers return to work, a better analysis of the effect that Speed Cameras have on Red Light violations should become apparent.
Financial Overview

Per state statute, the Authority remits all revenue, minus operation expenses to the Pennsylvania Department of Transportation’s Motor License Fund. PennDOT may utilize those funds for a Transportation Enhancement Grants Program (established by section 3116, relating to red light enforcement systems).

Collection Efforts

The PPA continues to actively collect unpaid Red Light Camera violations. Violators receive two (2) notices. If the violation is not paid within the first thirty (30) days, penalties accrue in thirty (30) day intervals to a maximum amount of one hundred and seventy five dollars ($175).

If a violation is still unpaid after one hundred and eighty (180) days, the violation is forwarded to one of the Debt Collection agencies under contract with the PPA. If a citizen accumulates three (3) Red Light violations or a combination of three (3) total Red Light violations, Speed Camera violations, or parking tickets, the violator’s vehicle becomes eligible for immobilization.

Historically, collection rates are strong. Generally, tickets and violations are closed 50% upon ninety (90) days, 72% within one (1) year, 83% within three (3) years, and 85% within five (5) years. After ten (10) years, collection rates drop below 1% since most violations have already been paid and there is little incentive to pay unless a citizen’s vehicle becomes immobilized or towed because of other infractions.

Despite best efforts, there are Red Light violations which are not able to be collected for a number of reasons, such as inability to locate the registered owner, out of state, etc. Some unpaid violations have now aged and should be considered uncollectable. Currently, as of August of 2021, outstanding debt by year is as follows:

</table>

As debt ages, the amount that can be collected reduces. It is recommended that a policy be implemented and approved by the Department of Transportation allowing the write off of outstanding tickets that have aged and are not likely to be collected or where the cost to collect the debt exceeds the outstanding balance due.
Changes in Intersections

At times, intersections are removed temporarily from the Red Light camera program, usually because of construction activities.

During this past fiscal year, there were no intersections which were out of service. It is anticipated that Island and Bartram Avenues will be undergoing construction; however, the projected start date is currently unknown.
Intersections Under Process

There are two (2) intersections that are in process of construction for Red Light Cameras. The intersections that are in process are 31st and Spring Garden Streets and 52nd Street and Lancaster Avenue. VIMS studies indicated that there was a high occurrence of violations at these intersections that would be positively impacted by Red Light Cameras. At the time of the study, there were a probable six hundred fifty-seven violators (657) at 31st and Spring Garden. The study also identified one thousand and three hundred and ninety-eight (1,398) probable violators at 52nd and Lancaster. These intersections are currently have permit approval to break ground for installation and are expected to be operational in 2022.

VIMs studies were recently conducted at 58th and Baltimore and Front and Hunting Park. Results from these studies show that there is a high rate of Red Light violations at each intersection. VIM noted that these two intersections are near highly visited locations. 58th and Baltimore is near a very busy shopping center and the other is near schools. Site visits have been completed at an additional seven (7) locations, with another six (6) in process. Many other intersections have been recommended for approval by various community interests; Exhibit A identifies all of the sites under consideration. Some of these additional intersections may be considered in the upcoming fiscal year.
